PLANTSURE

Vita-Lift

BOOST PLANT ENERGY, REDUCE STRESS

Plantsure significantly boosts plant recovery from and resistance to stress including stress caused by herbicides

Plantsure is an organic, plant derived source of auxins, cytokinins and growth regulators. It contains L-Amino Acids, organic acids and phytohormones which are readily absorbed by plants stimulating overall plant health and resistance to biotic and abiotic stresses.

PLANTSURE

Vita-Lift

Heidelberg Soya Yield/ha

IMPROVE YIELD

Boost yields with Plantsure

Plantsure has been proven to stimulate the photosynthetic rate in plants thereby increasing BRUX levels. Sustained, elevated BRUX levels ultimately lead to increased yields. The figure to the left illustrates the effect of Plantsure as compared to other, commercially available products.

HERBICIDE STRESS

Plantsure significantly reduces the effect of stress on crops induced by herbicides

Plantsure contains phytohormones which activate the Systemic Acquired Resistance pathway in plants. This natural mechanism provides resistance to stresses from the environment including those induced by herbicides.

The accompanying illustration shows a soya field which was treated with a combination Glyphosate + Sulfonyl Urea. Plantsure was added to the section of the field on the right. 98% weed control was achieved on the treated section with an average BRUX level of 7 in the crop. Only 30% weed control was achieved on the untreated section with an average BRUX level of 5 in the crop.
